PAIN-FREE AND BEAUTIFUL SMILES with *LUMINEERS*

---

In the 37 years of providing dental care to the entire family, from toddlers to great-grandparents, Dr. Yaroslaw V. Stawnychy has continuously strived to have the best quality of service and proven innovative techniques available to his patients. The entire staff takes continuous education courses way beyond the needed requirements so that they can be well informed as to the latest and best techniques. The newest developments in oral disease detection and prevention, esthetic and cosmetic dentistry, root canal treatment and periodontal therapy are incorporated into the daily routine of patient care.

Dr. Stawnychy provides minimally invasive restorative dentistry whose goal is to conserve healthy tooth structure and allows him to perform many restorations without extensive drilling. The focus is on prevention, remineralization and minimal dental intervention, and as a result less sensitivity and time spent in the dental chair.

One of the more significant advancements in recent dentistry is the development of the Cerinate Lumineers, proven in an on-going study for the last 20 years. Why is there so much talk about these Lumineers recently? Lumineers have developed the contact lens-thin porcelain technology that provides beauty and strength, while preserving the natural tooth structure. There is no painful fitting because there is no need to use a drill or anesthetic to prepare the teeth (in most cases). These veneers are painless and permanent. You can reshape awkward teeth, lengthen short teeth, fix uneven spacing and whiten stained teeth. If patients are fearful or sensitive these are a great alternative to the traditional crowns and porcelain veneers.

In cases where dental treatment may be uncomfortable or outright painful, Dr. Stawnychy provides total pain control through topical and local anesthetics, nitrous oxide administration, and one of the newer concepts of Enteral (oral) Conscious Sedation. This is a godsend for those that are terrified or merely uncomfortable with being in a dental chair.

Dr. Stawnychy and his staff are excited to offer these latest treatments to their patients and will be happy to discuss any questions and provide case studies for anyone interested. They have found that patients embarrassed to smile whether for pictures or in general significantly improve their appearance and are more self confident with a beautiful smile.

Dr. Stawnychy's General Dentistry Practice is located at 115 Orient Way, Rutherford, N.J. , telephone 201-438-3330.
